For Immediate Release

Inteset Launches its Second Generation of Home Theater Media Server and Extender Systems to be Showcased at CEDIA 2005 Booth #2109

Hanover, MA - June 15, 2005 - Inteset, creators of advanced home entertainment systems, unveils its next generation of products. The flagship Denzel TP420-SD home theater server system stores and plays back nearly all digital media content. The VANA VA6420-SD extends that media content to other rooms. The combination of these entertainment convergence systems simplify and replace most A/V components in the home.

The Denzel TP420-SD is a simple-to-use home entertainment convergence system that allows storage and play back of an entire digital media library. Denzel consolidates PVR, picture viewer, CD player, DVD player/burner, SDTV tuner, HDTV tuner, FM tuner, multi-zone, surround sound audio receiver, Internet browser, and 3D gaming system functions into one A/V component. Denzel supports up to two displays and has a two Terabyte internal protected storage capacity with the ability to extend storage using Inteset external TeraRAID™ storage devices. All functions can be controlled with an included backlit remote or any advanced control system such as Crestron, AMX, or Elan.

The VANA VA6420-SD Home Theater Extender system, allows all content stored on the Denzel server to be easily distributed to any room in the home via an Ethernet or wireless network. Using the same simple interface as Denzel, VANA can play back recorded

HDTV, DVD movies, home videos, music, and pictures in any room. Furthermore, Denzel's multi-zone audio function can be control via VANA. The VANA system can also act independently and is equipped with its own DVD/CD player/burner, SDTV tuner and up to 400Gb of internal storage.

Inteset Home Entertainment Systems are based on the Windows XP Media Center Edition 2005 platform. The Denzel and VANA systems offer many advantages over the competition for the following reasons:

- **Massive Reliable Storage** – The Denzel system can be purchased with up to 2 Terabytes of internal protected storage (RAID 5 technology); external protected storage can be added at up to 2 Terabyte increments using Inteset's high-speed TeraRAID™ external storage systems.
- **7.1 Channel Surround Sound** – The Denzel sound system processes Dolby EX and DTS-ES technologies and is THX certified. A surround sound receiver or pre-amp can be bypassed connecting the system directly to an amplifier.
- **3 Audio Zones** – Independent audio devices on the Denzel can distribute audio to a 2nd and 3rd zone providing music to a whole home or other speaker system.
- **Stable, Reliable, and High-Performance** – Systems are optimized for entertainment use. All entertainment functions are time tested and use premium, compatible hardware.
- **Exclusive Inteset Software Modules** – Inteset develops exclusive modules and services for its systems. Some modules include: My Movies (with free Inteset movie profile import service); multi-zone audio control; advanced control device communication service; VANA Extender connectivity service; and more.
- **Crestron, AMX, Elan Advanced Control** – Control of the Inteset Multi-zone Audio and Windows Media Center functions using advanced control systems.
- **Powerful Media Extender** – Using an Inteset VANA VA6420-SD Home Theater Extender system, all content stored on the Denzel server can be distributed to any room in the home with plug-and-play ease.
- **Upgradeable** – Hardware and software upgrade packages will be available. Inteset is continuously developing exciting new modules as well as improving existing products.
- **CEDIA Appeal** – Inteset systems appeal to CEDIA dealers and integrators due to system ease-of-use, reliability, unique modules, price point, and interoperability with advanced control systems.

The Denzel TP420-SD and VANA VA64420-SD systems are sold through Inteset's nationwide dealer network. The list price for the Denzel TP420-SD is \$5,995. The list price for the VANA VA420-SD is \$2,395.

About Inteset, LLC

Inteset, LLC, headquartered in Hanover, Massachusetts, offers high-quality home entertainment convergence systems. Since its inception in 2003, Inteset has focused on creating robust products that combine home entertainment components into one unit removing clutter and simplifying the user experience. Inteset systems appeal to A/V dealers and integrators for reliability, ease-of-use, unique entertainment modules and services, price point, and interoperability with advanced control systems. With Inteset's foresight and ingenuity, it is quickly becoming a leader in the new age of digital home entertainment equipment.
