Inteset receives ISF RL Certification for its Denzel Media Server Line

Hanover, MA, July 25, 2006 – Inteset, LLC, developers of advanced home entertainment systems, has been awarded the prestigious Image Science Foundations “*ISF RL Certification*” for its *Denzel* media server line. Inteset has become one of a select few companies to achieve this highly coveted distinction, which is only presented after documented proof of its products’ superior qualities. The ISF Research Lab provides comprehensive testing, certification of performance quality, and a publicly recognizable logo program that high-end A/V dealers and consumers will identify with Inteset’s exceptional products.

Inteset’s mission is to provide superior systems based on Microsoft’s Windows Media Center Edition (MCE) platform that uniquely satisfies its dealers’ installation and operational requirements. “Inteset dealers are extremely conscious of quality audio and video output for high definition, movie, and video content. Their clients accept only the very best,” says Jeff Lloyd, President of Inteset. “With ISF RL certification, dealers will feel even more confident that Inteset products are “best in class” and produce the quality of output that exceeds the demands of their clients.”

"We're delighted to see Inteset successfully promoting Media Centers to the high-end A/V market. The ISF RL certification further validates both Inteset's business goals and the quality video output Media Center can produce," says Todd Rutherford, Home Control Program Manager - eHome of Microsoft.

"ISF RL video quality certification is designed to differentiate the truly superb Media Centers from the mundane units that are the norm in the PC industry. The tests in our lab in Microsoft Studios confirm that Inteset's Media Center video performance is first rate. The Inteset MCE system has earned its place in state-of-the-art home theater installations," says Joel Silver, ISF President.

Inteset demonstrates that it provides industry-leading solutions to the most discerning people in the A/V world, which include the dealers who offer Inteset's products, and their clients, who use these systems every day for their entertainment enjoyment. Inteset's media servers have become a top choice in home theater environments.

Inteset, LLC has been creating high-end home entertainment products since 2003. The award-winning Denzel Media Server and VANA Advanced Extender systems, along with the newest all-in-one Touch Screen, Julia, appeal to A/V dealers and integrators for high-quality, reliability, ease-of-use, custom built and unique entertainment modules and services, price point, and interoperability with advanced control systems. Products are available via preferred Inteset dealers.

To learn more, visit www.inteset.com. Inteset products will be on display during the CEDIA show in Booth #663 this September and in the showrooms of dealers nationwide.
