Inteset Addresses Windows Media Center Concerns with its Secure-Lockdown Technology™

February 2, 2006 – Hanover, MA -- Inteset, makers of advanced home entertainment systems with Windows Media Center Edition 2005, fortifies its commitment to addressing the concerns of the A/V installer community. Stability issues with the Windows Media Center entertainment platform (MCE) have been a major obstacle to installer confidence. Inteset's Secure-Lockdown Technology™ creates a virtual "embedded" environment where outside vulnerabilities become a non-factor.

"The reasons for system instability can be caused by many factors including malicious applications, viruses, internet downloads, and use of administrative features by inexperienced users." says Jeff Lloyd, CEO of Inteset. "Inteset has created Secure-Lockdown Technology that protects against these elements. Installers can choose to lock out users from performing actions that allow these outside elements to affect the system as well as inactivate other vulnerable features of the Windows operating system. It's also great for end users who want to prevent others [kids, babysitter, etc.] from tinkering with the system." Lloyd continues to say, "Inteset now has one of the most solid MCE systems on the market. With our Secure Lockdown technology, internal RAID 5 data protection, and an independent Operating system drive, it's hard to find a more stable system."

Inteset's Secure-Lockdown technology™ is now included on all of its entertainment systems, including the Denzel TP420-SD, the VANA VA6420-SD, as well as their new Intel® Viiv technology™ based products (Denzel TP420-Si and VANA VA6420-Si) at no extra charge. Owners of previously purchased Denzel and VANA systems can get upgrades from their local dealer.

To learn more, visit Inteset in booth #726 at EHX this March, go to www.inteset.com, or contact your local Inteset dealer.
