Inteset to Support Intel® Viiv™ Technology Platform

January 13, 2006 – Hanover, MA – Inteset, makers of advanced home entertainment systems with Windows Media Center Edition 2005, has aligned their newest systems with the Intel® Viiv™ technology platform technologies announced at CES earlier this month.

Of the shift to Intel Viiv technology, Jeff Lloyd, president of Inteset, says “the specifications of the Intel Viiv technology platform are perfectly inline with the focus of our media center systems. Ease-of-use, reliability, and shared content have been part of Inteset’s mission statement since day one...” Lloyd continues to say, “This platform, coupled with Inteset’s exclusive features, like advanced control, unique software modules for MCE, and large internal protected storage, will further entice our high-end dealer and installer target market.”

“Inteset’s Denzel TP420-Si and Vana VA6420-Si products are great examples of the digital entertainment experience that entertainment PCs based on Intel Viiv technology can deliver for consumers,” said Gerald Holzhammer, Vice President of the Digital Home Group at Intel. “Intel looks forward to working with Inteset on providing its customers with an effortless entertainment experience that puts consumers in control of their movies, music, games, photos and more.”

Inteset will be demonstrating their Intel Viiv technology-based products at Intel’s booth at EHX this March. To learn more about Inteset products, go to www.inteset.com or call 866-543-3797.
